

Preventing scale and build up in your system with a water softener.

Treatment and Maintenance

Installing and properly maintaining a water softener delivers immediate and long-term returns for your business by preventing costly scale buildup throughout your water system.

This essential treatment not only extends the life of your plumbing infrastructure and water-using equipment but also increases energy efficiency, reduces cleaning costs, and helps maintain compliance with water hygiene regulations—all contributing directly to your operational efficiency and bottom line.

Key Benefits

Protects Critical Infrastructure

Prevents scale buildup in pipes, boilers, calorifiers and water outlets, extending equipment lifespan and preventing expensive system replacements

Lowers Maintenance Expenses

Minimises the need for descaling treatments, reduces equipment breakdowns, and prevents premature failure of water-using appliances

Reduces Energy Consumption

Maintains optimal heat transfer efficiency in heating systems by eliminating insulating scale layers, potentially reducing energy costs

Enhances Operational Performance

Improves cleaning efficiency with better detergent performance, reduces Legionella risk factors, and ensures consistent water quality throughout your facility

Is your water softener working at maximum capacity? Is it as effective as it should be?

Many industrial and domestic settings install water softeners in their systems to prevent scale build up and to maintain an efficient water system.

Once installed, it will need servicing. Maintenance of your soft water supply to your hot water system, bathrooms and showers will ensure it is free from hard compounds and servicing should be completed to avoid costly future repair works.

Preventative servicing will ensure your water system maintains high levels of water hygiene, compliance, and longevity. Without regular servicing, the worse it gets and the more difficult it becomes to put right.

Protect high quality water supply, reduce maintenance costs and scale build up.

Total Environmental Compliance can help you

We offer very competitive Water Softener Services, full installation and repairs that can be easily customised to any level of requirements

We carry out water softening services for Ion exchange, simplex, duplex and non-electric water softeners.

Water softener services should be carried out annually or in accordance with the manufacturer's guidelines.

Our Water Softener Service:

- ✓ Is designed to remove the hardness of minerals from the water supply
- ✓ Will eliminate scale build up in all water outlets and pipes
- ✓ Reduces the risk of Legionella
- ✓ Ensures high water quality and hygiene levels
- ✓ Helps you avoid expensive future repairs in your water system
- ✓ Needs to be carried out annually (depending on the manufacturers guidelines)

As an extra, we can provide a resin health check to assess the quality and condition of your water softener.

We offer performance, major and combined servicing options. Get in touch with us to discuss our fully comprehensive Water Softener Service.

Why Choose Us?

- ✓ **Expertise You Can Trust:** With years of experience, our team ensures top-notch installation and maintenance of water softeners and reverse osmosis systems.
- ✓ **Cutting-Edge Technology:** We use the latest technology to provide you with the best water purification solutions.
- ✓ **Customer Satisfaction:** Our priority is your satisfaction. We offer personalized services tailored to your needs.

Please get in touch for more details about how we can help you prevent scale and build up in your system with a water softener.
